

Name _____ Date _____ Period ____ Reviewed by _____

SUBROUTINES Lab**Focus :** Programs involving subroutine calls written in MIPS assembly.

Description of check to be performed.	Points/Possible Points
All Programs: Comments include author name, date and purpose	____ / 10
Program to maximum of two numbers has a nice prompt for accepting input from user and has a nice message to display the greater of the two numbers. Program works well and works with negative numbers.	____ / 10
Program to maximum of three numbers has a nice prompt for accepting input from user and has a nice message to display the greatest of the three numbers. Program calls on the maximum of two numbers and does not do the comparison itself. Program works well and works with negative numbers.	____ / 10
Factorial is written well and works with positive numbers greater than 0. Factorial is recursive and pushes and pops off from the stack effectively. Factorial computes the right result and prints it.	____ / 15
Fibonacci is implemented and works well.	____ / 20
Circle applicable - Linked List is / is not implemented using heap / stack	____ / 20
